

Granulated Modified Roof Repairs and Beautification

is easy with EternaBond DoubleStick and a little matching granule. It is a repair that will last for years, maybe decades! Perfect for fast, easy repair of hail damage, and for hiding seams and overlaps where looks are important.

The repair shown in this photo series is now 5 years old, blends perfectly with the rest of the roof, and is still water tight. Best of all it cost less only \$3.00 and took less than 10 minutes to complete!

Figure 1: After sweeping repair area of debris, remove release liner from one side of EternaBond DoubleStick and apply to roof surface.

Figure 2: Roll or rub with pressure to activate wetting-in (fusing) action.

Figure 3: Remove 2nd release liner to expose top of MicroSealant surface.

Figure 4: Pour matching granule onto exposed EternaBond MicroSealant. Matching granule can often be found in the gutters, etc.

Figure 5: Roll or push granule into MicroSealant. Complete!
