

ROOFSEAL™

- 4 colors available (black, gray, white & tan)
- Use on all roofs (TPO, Hypalon, EPDM, aged PVCs, Rubber, Metal and more!)
- **RoofSeal Plus** – Twice the adhesive for sealing deeper surfaces (Available in black and white only)

WEBS SEAL®

- Fabric backing
- Maximum conformability for irregular surfaces
- Designed to hold all roof coatings, sealers or paint
- Restores drain pans
- Perfect for making all roofs/surfaces watertight before coating is applied
- Easy & permanent solution for sealing flex duct systems

ALUMIBOND

- 4 mil aluminum backing for heavy duty applications
- 20 mils thick
- Creates moisture barrier
- Great for drain pans, tanks, and troughs
- Fuses to rigid ductwork
- Good for preventing air and water leaks in ductwork

COPPERFLASH™

- 20 mils thick
- Repair leaking seams on copper gutters and roofs
- Used for valley restorations
- Real copper, will patina over time
- Repair/Replace copper flashing

DOUBLESTICK™ / MICROSEALANT PUTTY TAPE

- 60 mils thick
- Twist into rope and use to fill voids, gaps, penetrations and holes
- For use between two surfaces including dissimilar surface materials

WINDOWSEAL™

- 20 mils thick
- Flexible, conformable window wrap that requires no screws, staples, or anchors to bond with any of these surfaces: Brick, wood, OSB, concrete, stucco, building wraps

PRIMERLESS SAFETY TAPE

- Perimeter roofing tape
- Visually mark roof edges and dangerous hazards
- Bonds to virtually all roof types
- Can be used to seal roof edges while also serving as a warning of roof perimeters and hazards

ETERNA CAULK™

EternaCaulk is used to seal roof joints (seams) and tears, flashings, copings, skylights, gutters, etc. It can be used to fill holes on most roofing materials, including TPO. It even works under water and on wet surfaces. EternaCaulk is compatible with all EternaBond MicroSealant tapes and is ideal for roofing applications where appearance is important. Available in black, white and clear.

ETERNA PRIME™

- Specially formulated to work with EternaBond tapes
- Creates a stable surface for installation of EternaBond tapes
- Prepares surface for repair (old tar, oxidized surfaces, brick, mortar, etc.)
- Allows installation of EternaBond tapes to -20°F
- Can be used over talc on new EPDM

COVERAGE
Gallon: 300 sq. ft
Quart: 75 sq. ft
Spray: 14 oz.

ETERNA CLEAN™

Quick and easy spray cleaner for all single ply roof surfaces. Prepares the surface for EternaBond MicroSealant tapes. Helps release of contaminants like oxidation, grime, oil & grease, tree sap, etc. from all roof surfaces.

PRODUCT FEATURES/BENEFITS

- Bonds to: Hypalon, aged PVC, T.P.O., EPDM, Modified, Metal, BUR, Tile and more.
- Provides a long lasting, watertight seal on: Gutters (even copper), Skylights, Flashings, Copings, Curbs, AND MORE!!
- Stays flexible to -70°F
- UV Stable
- Easy 3 step Installation
- Wide Application Range (-20°F to +200°F)
- Self Priming
- Shelf Life: 5+ Years

CUSTOM SIZES

EternaBond tapes are available in widths of 2" thru 48". Custom sizes are also available. Please call us Toll Free at 1-888-336-BOND (2663) or visit our website for additional information.

ULTIMATE ROOF REPAIR KIT

Enhanced waterproofing and roof repair kit for the professional. Everything contained in a wide-opening shoulder tool bag.

- Kit Includes:
- 4" x 25' RoofSeal White
 - 2" x 50' DoubleStick
 - 4" x 25' RoofSeal Black
 - 14oz Spray EternaPrime
 - 14oz Spray EternaClean
 - HD 2.5"x2# Roller
 - Utility Knife
 - Scoring Pad
 - Seam Probe

ADCO
 Featuring
MICROSEALANT TECHNOLOGY

THE REAL DEAL!

A family of sealants that contain no double bonds between carbon atoms, MicroSealants are comprised of a single bond between carbon atoms which result in a molecular structure that is extremely stable. This molecular structure is resistant to oxygen, ozone, heat, extreme cold and the effects of temperature cycling.

MicroSealants will bond to almost any selected substrate at a molecular level, increasing surface area, and resulting in a "fusing" action. MicroSealants are self-healing. They are extremely tolerant of chemical contact, making them ideal for use in extreme industrial environments.

Unlike most traditional caulking, mastics, tapes, and sealants, MicroSealants are environmentally stable. They contain no solvents or VOCs, are safe to use (virtually, although not technically food service grade) and emit no off-gasses so they will not compromise air quality within the building envelope.
